

Value Chain Control

Digital Electronic Passport

ESPR Ecodesign for Sustainable Products Regulation

Obedir enables a setup to manage components for building the required value chain to handle Digital Electronic Passports. It distributes requirements, collects auditable data, ensures traceable storage, and integrates QR code management into the product delivery process through an API, all while maintaining efficiency, quality, and compliance.

“We are seeking a PILOT partner to embark on a journey towards enhanced regulatory control with Obedir. Accelerate your ability to govern your entity and effectively manage all dependencies.”

RELIABLE

Auditable & Secure

TRACEABLE

Visual Trails

LICENSE FEE

Obligated Economic Operator

€1 per Month / Directly Interfaced Stakeholder
+ cost of storage and computing

Free for Supporting Stakeholders

in Your Value Chain

FREE TO SCALE

Obedir Software is free for all digital electronic product stakeholders. It helps organize, understand requirements, take action, send auditable data, and distribute passport requirements deeper into the value chain, ensuring compliance and measurable progress without the license cost affecting your budget.

... then leverage value chain capabilities via other Obedir regulations or financial data.

HOW WE BUILD VALUE CHAIN CONTROL

Value Chain Builder

IP: Technical component that enables self-propagation throughout the value chain.

Requirement Distribution

IP: Assistant in mandating, assigning and distribute requirements throughout value chain.

Data Collection

IP: Technical components to assist and process data from all stakeholders in value chain.

Control Tower

IP: Visualisation of the value chain and all associated stakeholder states and deliveries.

AI Enhancement

IP: Leveraging data and regulations for efficient operations and compliance aggregation.

Auditable Traceability

IP: Maintains records for accountability and regulatory compliance.
